FileReader

Java FileReader class is used to read data from the file. It returns data in byte format like FileInputStream class.

It is character-oriented class which is used for file handling in java.

```java
import java.io.FileReader;
import java.io.IOException;

class FileReaderClass {
    public static void main(String []args) throws IOException{
        System.out.println("Started......");
        FileReader input = new
FileReader("/home/neha/java.info/testFile");
        //public class FileReader extends InputStreamReader
        int i=input.read();
        while(i != -1){
            System.out.print((char)i);
            i=input.read();
        }
        input.close();
        System.out.println();
        System.out.println("Finished......");
    }
}

OUTPUT:
Started......
New Testing value....
Finished......
```
